The Operations Brain

Traditional voice bots rely on static FAQs that quickly become obsolete. The Vaakriti Operations Brain maintains continuous, bi-directional synchronization with your daily operational realities.

PILLAR 01

Spoken Voice Ingestion

Business owners and clinic coordinators update business rules by speaking naturally to their dashboard. No spreadsheets or technical updates required.

> *"Doctor Sharma 4 PM se pehle available nahi hain."*

PILLAR 02

Real-Time Availability

Direct calendar and appointment ledger binding ensures the AI never offers booked time slots or promises out-of-stock inventory to callers.

> *"Only 3 consultation slots remaining for today."*

PILLAR 03

Dynamic Price Policies

Instantaneous adjustment of emergency charges, diagnostic discounts, or delivery fees applied automatically across all concurrent calls.

> *"Apply festive 10% discount on health checkups."*

OPERATIONAL SPECIFICATIONS & DATA INGESTION

- **Atomic Ledger Updates:** Operations updates take effect globally across active and future SIP channels within <500ms.
- **Multi-Channel Ingestion:** Accepts updates via WhatsApp voice notes, dashboard web forms, or REST Webhook APIs.
- **Automated Conflict Resolution:** Flags overlapping appointments and alerts the business owner before confirming with caller.
- **Tamper-Proof Audit Logging:** Full historical ledger of all knowledge modifications with user identity and timestamps.
