Enterprise Security & TRAI Standards

Engineered with non-negotiable security guardrails (SEC-001 through SEC-011) ensuring complete compliance with Indian telecommunications, privacy, and RBI digital payment standards.

TRAI & DLT Calling Governance

Outbound calls are restricted to lawful calling windows (09:00 to 21:00 IST). Automated scrubbing against the National Do Not Disturb (DND) registry ensures full immunity from regulatory penalties.

Mandatory AI Identity & Recording Disclosure

Every single call begins with mandatory disclosures ("Main Trinetra/Vaakriti se Arika bol rahi hoon, ek AI assistant... Service quality ke liye yeh call record ki ja sakti hai") safeguarding enterprise transparency.

RBI Non-Custodial Direct Settlement

Vaakriti never holds customer money. Payments execute directly from caller UPI apps into your designated corporate current account, fully conforming with RBI merchant settlement norms.

Tamper-Evident SHA-256 Audit Trail

Every conversation transcript, consent verification, and financial reconciliation is written to an immutable audit register secured by row-level cryptographic signatures.

ENTERPRISE DATA PROTECTION STANDARDS

Tenant Isolation: Strict multi-tenant schema partitioning ensuring zero cross-tenant data leakage.

Transport Security: End-to-end TLS 1.3 encryption across all SIP signaling, WebSockets, and REST APIs.

Key Governance: Zero client-side exposure of service keys; tokenized temporary sessions only.
