VAAKRITI

AUTONOMOUS ENTERPRISE VOICE INFRASTRUCTURE

The voice that runs your business.

Answer, adapt to today's schedule, issue tax invoices, collect payments and escalate to the owner in a single call.

- ✓ Instant GST Invoicing
- ✓ Non-Custodial UPI Settlement
- ✓ Fluent Hindi, Hinglish & English
- ✓ TRAI & Telephony Compliant

DESIGNED FOR ENTERPRISE OPERATIONS IN INDIA

Clinics • Logistics & Transport • Retail & Commerce • Professional Services

2026–2027

01. INDUSTRY REALITY

Why Ordinary Voice Bots Fail Real Businesses

Commercial voice bots can speak, but they cannot operate. When deployed in Indian customer operations, standard voice bots break down in four critical moments:

1. Outdated Information & Phantom Bookings

STATIC BLINDNESS

Doctors arrive late, routes change, and stock runs out during the day. Ordinary bots cannot update their facts without code changes, booking double-booked or cancelled slots.

Customer Impact: Disappointed callers arrive at closed clinics or book unavailable items.

2. Dead-End Calls with No Payment Settlement

REVENUE LOSS

Calls that end with *"Please visit our website to pay"* lose up to 85%* of customers. Ordinary bots cannot generate tax invoices or dispatch UPI payment links on the call.

Customer Impact: Verbal sales agreements evaporate the moment the caller hangs up.

3. Infinite Call-Forwarding Loops

ROUTING CRASH

When an owner forwards their phone to an agent, requests to speak to the owner trigger an endless loop back to the agent. Without intelligent routing, the phone rings endlessly.

Customer Impact: Important VIP clients and family members get trapped in automated loops.

4. Robotic Pauses & Audio Crackles on Indian Telecom Networks

UNNATURAL PACE

Unoptimized systems suffer 1.5 to 2.5 second pauses between turns and produce audible audio crackles when playing over Indian mobile networks (Airtel, Jio, Vi).

Customer Impact: Callers realize they are talking to a slow machine and disconnect early.

Vaakriti AI was engineered to eliminate these breakdowns with a complete, closed-loop operating system. →

**Based on internal estimates; results vary by deployment.*

02. PLATFORM OVERVIEW

Meet Vaakriti AI: The Complete Business Operator

Vaakriti is an enterprise voice infrastructure that speaks naturally, checks live business facts, generates tax invoices, collects verified payments, and escalates to owners in real time.

THE CLOSED-LOOP OPERATIONAL CALL FLOW

1. Customer Call — Identity & notice given → **2. Live Brain** — Real-time slots & rates → **3. In-Call Invoice** — GST PDF + UPI QR sent → **4. Verified Paid** — Receipt & owner alerted

VIP / Family Branch: Recognized instantly → Connected to owner's direct mobile line with context whisper. **Loop-Free**

1. Operations Brain Hub

Owners speak daily audio memos to update operating hours and rules instantly without reprogramming.

2. Cash-to-Call Settlement

Turns phone negotiations into closed deals by sending custom GST invoices and UPI QR codes on WhatsApp.

3. WhatsApp Receipt Vision

Inspects customer payment screenshots, verifies the transaction reference, and marks bookings confirmed.

4. Smart Dual-SIM Escalation

Safely routes family and high-value customers to the owner's personal phone line without forwarding loops.

5. Human-Paced Conversation

Ultra-responsive turn timing with zero robotic lag, clear audio, and polite human-style interruption handling.

6. Indian Telephony Compliance

Built-in AI identity disclosure, call recording notices, calling hour limits, and Do-Not-Disturb checking.

03. ADAPTIVE OPERATIONS

Live Business Brain & In-Call Payments

Your voice agent stays updated with today's real-world business status, and turns verbal promises into immediate bank settlements.

A. THE THREE PILLARS OF THE OPERATIONS BRAIN

Spoken Daily Directives

Record a short voice note on your phone. The agent adopts the new schedule instantly.

> **"Aaj salon 10:00 baje tak band rahega to uske baad hi appointment book karna."**
> *("The salon is closed until 10:00 AM today; please book appointments only after that.")*

Live Slots & Calendar

Real-time appointment calendar sync prevents double bookings. Booked slots vanish immediately.

> **"11:30 baje ka slot book ho gaya hai, agla available samay 12:00 baje hai."**
> *("The 11:30 slot is now reserved; the next opening is at 12:00 PM.")*

Inventory & Pricing

Maintains available packages, transport routes, and lowest negotiation limits for accurate quotes.

> **"Humare paas 2 gaadiyan available hain Kanpur se Delhi route ke liye."**
> *("We have 2 vehicles available for the Kanpur to Delhi route.")*

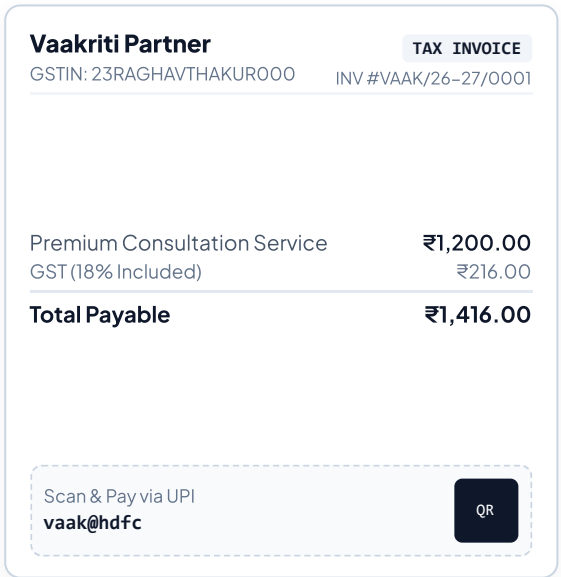

B. 4-STEP IN-CALL INVOICE & PAYMENT SETTLEMENT

1. Spoken Deal Extraction
Listens to the agreed price and service description during the call.

2. Statutory GST Invoice Built
Generates a clean tax invoice with your company logo, GSTIN, and tax breakup.

3. WhatsApp Invoice & QR Sent
Pushes the invoice PDF and scan-to-pay QR to caller's WhatsApp before call ends.

4. Direct Settlement
100% of customer funds transfer directly to your business account or UPI ID.

04. CLOSURE & ESCALATION

Automated Verification & Safe Escalation

Close the loop automatically: verify customer payment receipts via WhatsApp, and safely transfer urgent calls to the owner without infinite forwarding loops.

A. WHATSAPP SCREENSHOT & TRANSACTION VERIFICATION

Universal App Support

Inspects payment receipts sent on WhatsApp from Google Pay, PhonePe, Paytm, BHIM, and bank transfers.

GPay | PhonePe | Paytm | NetBanking

12-Digit Reference & Status

Extracts the official 12-digit transaction number, verifies payment status (Success vs Pending/Failed), and reconciles the order.

✓ Status: SUCCESS • UTR: 432109876543

Customer Auto-Confirmation: "Aapka payment verify ho gaya hai. Aapka order confirm hai. Dhanyawad!" INSTANT

B. LOOP-PROOF WARM TRANSFER TO OWNER

Dual-SIM Anti-Loop Routing

Configure your personal secondary number (SIM 2). When callers ask for the owner, calls forward strictly to SIM 2 to prevent infinite looping.

Family & VIP Priority List

Pre-approved contacts bypass the automated agent entirely. They are connected directly and excluded from all outbound campaigns.

20-Second Fallback Reassurance (If Owner Cannot Answer)

> **"Raghav ji abhi dusri call mein vyast hain. Maine unhe aapka urgent message aur contact number WhatsApp par bhej diya hai, woh jald call back karenge."**
> *("Raghav is currently on another call. I have sent your urgent message and contact number to his WhatsApp; he will call back shortly.")*

05. QUALITY & GOVERNANCE

Speed, Audio Clarity & Regulatory Safety

Natural conversational timing tuned for Indian telecommunication networks, paired with mandatory regulatory safeguards.

A. FOUR CUSTOMER-FACING SPEECH BENEFITS

Natural Conversation Pace FAST ONSET

Responds in a natural, human-paced rhythm. When the customer finishes their sentence, the agent responds without awkward, robotic dead air.

Crystal-Clear Phone Audio NO CRACKLES

Natively formatted for Indian telecom carriers, eliminating digital distortion, voice crackles, and clipping across mobile devices.

Instant Answers to Inquiries LOW DELAY

Begins streaming answers immediately as customer finishes talking, keeping the conversation fluid, energetic, and engaging.

Seamless Caller Interruption SMART BARGE-IN

When a customer speaks while the agent is talking, the agent stops immediately and listens with polite attentiveness.

B. THREE MANDATORY REGULATORY SAFEGUARDS

1. **Mandatory AI Identity & Recording Disclosure**
   Every call begins with clear disclosure: *"Main Vaakriti se bol rahi hoon, ek AI assistant. Service quality ke liye yeh call record ki ja sakti hai."*

2. **Statutory Calling Hours Floor (09:00 to 21:00 IST)**
   Hard technical safeguards prevent outbound marketing calls outside the legally permitted window under Indian telecom regulations.

3. **Real-Time Do-Not-Disturb (DND) & Consent Scrubbing**
   Automatically verifies phone numbers against national and internal preference registries to prevent spam complaints.

06. COMPETITIVE BENCHMARK

Why Choose Vaakriti AI?

A transparent comparison between human BPO call centers, generic voice bots, and Vaakriti's closed-loop enterprise infrastructure.

CAPABILITY	TRADITIONAL CALL CENTER	GENERIC VOICE BOT	VAAKRITI AI SYSTEM
Daily Schedule Adaptability	Requires daily team briefings; human error	Static prompt; cannot adapt	Spoken Voice Directives in real time
In-Call GST Invoice & Payment	Delayed email link; 2-6 hours lag	None (directs to website; 85% drop*)	Instant GST Invoice + UPI QR sent on WhatsApp
Payment Proof Verification	Manual accounts review (24hr SLA)	None (blind to receipts)	WhatsApp Vision OCR extracts 12-digit UTR
Owner Escalation	5 to 15 min hold queues	Infinite forwarding loop	Dual-SIM Anti-Loop + 20s spoken fallback
Conversational Pace	Natural human timing	1.5s-2.5s robotic pauses	Human-paced conversation
Indian Telephony Sound	Standard phone quality	Voice crackling & clipping	Native telecom audio (zero distortion)
Family & VIP Protection	Manual caller ID scrutiny	Pitches owner's family as leads	Whitelisted & excluded from sales calls
Statutory Compliance	Inconsistent human scripts	Risk of regulatory penalties	Built-in AI disclosure & DLT hours

3.4x*
FASTER PAYMENTS
In-call WhatsApp QR delivery closes deals within 15 minutes.

75%*
LOWER OPERATING COST
Eliminates after-hours staffing while achieving 24/7 availability.

Zero*
MISSED CUSTOMER CALLS
Automatic callback booking and instant WhatsApp alerts.

PROVEN IN: 🏥 Clinics & Doctors 🛒 Retail & Commerce 🚚 Logistics & Transport 💼 Telecom & Services

**Based on internal estimates; results vary by deployment.*

07. FAST DEPLOYMENT

Live in 4 Days

A simple three-step deployment plan to take your enterprise from catalog setup to live carrier cutover.

D1 **Day 1: Operations Brain Setup & Knowledge Connection**
Connect your product catalog, service price lists, appointment slots, and attest non-custodial UPI settlement details.

D2–3 **Days 2–3: Telephony Setup & Verification Testing**
Provision virtual numbers, configure dual-SIM forwarding lines, test WhatsApp receipt callbacks, and verify Hindi/Hinglish speech accuracy.

D4 **Day 4: Live Carrier Activation & Go-Live**
Switch call routing to live lines, verify telecom registrations, and grant full analytics dashboard access to your management team.

99.9% Uptime SLA	RBI-Aligned Payouts	Tamper-Proof Audit
High-availability enterprise voice network	Direct non-custodial bank settlement	Append-only verified transaction logs
